

Harsh Darji

Project Lead - Senior iOS Engineer | Swift • UIKit • SwiftUI • Scalable Architecture • Performance Optimisation

+91 9662108047 • Gujarat, India • dev.harsh1008@gmail.com • Portfolio | LinkedIn | GitHub

Senior iOS Engineer & Project Lead with **5.5+ years of experience** building scalable, high-performance applications using **SwiftUI and UIKit**. Successfully led projects from planning to deployment, coordinated with teams and clients, and delivered **20+ apps across multiple domains**. Recently leveraged **AI tools and AI Automation** to significantly reduce development time and improve development efficiency. Tools like **AI Coding Assistant inside Xcode, GitHub Copilot**.

Expert in **Mobile App architecture, performance optimization, offline-first systems**, and **secure Firebase/REST API integrations**. Proven in **modernizing legacy code**, improving **stability**, and **reducing crashes**.

Strong focus on **clean, maintainable architecture** and **engineering best practices**, with effective **communication skills (IELTS L:7.0 Grade out of 9.0)** and experience working with **international clients**, including **project management** and **mentoring junior developers**.

Open to **cross-platform development (React Native, Flutter)**, leveraging strong **mobile fundamentals** with the ability to **rapidly learn and adapt**.

Professional Experience

Project Lead - Senior iOS Mobile Application Developer | Evince InfoSoft - Surat / Rajkot, Gujarat (Remote)
March 2024 – Present

- **Collaborated with international clients and stakeholders**, leading **end-to-end project execution**, mentoring junior developers, and translating business requirements into **scalable, maintainable solutions**
- **Modernized legacy iOS applications** and led **Swift migration (3 – 5/6)**, introducing **async/await and structured concurrency** into production systems
- **Resolved complex issues** by improving **memory management, threading, and eliminating retain cycles**, enhancing overall app stability
- **Architected and enhanced networking layer**, ensuring **secure authentication, reliable API communication**, and reducing technical debt by replacing deprecated APIs
- **Engineered advanced multi-camera system** using **AVCaptureSession**, enabling **simultaneous front & rear 4K 60fps recording**, with **real-time processing, compression, password-protected ZIP uploads**, and **secure Firebase Storage pipeline**, along with capturing **sensor data (GPS, accelerometer, gyroscope, magnetometer, barometer, pedometer, device motion)** for a complete production-grade solution
- **Scaled enterprise iPad application** by implementing **offline-first architecture** and optimizing performance, improving **stability, responsiveness, latency, and resource utilization** for seamless real-world usage

Senior iOS Developer | Ambiw - Rajkot, Gujarat
August 2022 – February 2024

- **Owned end-to-end delivery of iOS applications**, from **requirement discussions to App Store release**, acting as a **bridge between clients and engineering** while leading technical direction
- **Improved performance and memory efficiency (~10%)**, resolving **production issues including memory leaks and networking bottlenecks**, significantly enhancing app stability and user experience
- **Established clean architecture and reusable components**, accelerating development, while **mentoring developers**, guiding best practices, and expanding product capabilities with **watchOS extensions and widgets**

Junior iOS Developer | Unused Brain Studios - Rajkot, Gujarat
January 2022 – May 2022

- **Contributed to crypto wallet development**, integrating **Web3 SDKs for secure transactions**, while delivering **scalable features across social and service-based applications**
- **Refactored existing codebases** to improve **performance and maintainability**, collaborating with team members to ensure **timely delivery and high code quality**

Junior iOS Developer (Intern → Full-Time) | Tilva ArtSoft - Rajkot, Gujarat
December 2019 – November 2021

- **Assisted in development and release of iOS applications** on the App Store, contributing across different stages of the development lifecycle

- **Worked with REST APIs and Firebase integrations**, implementing features across multiple domains
 - **Fixed bugs and performed performance optimizations**, supporting testing, debugging, and deployment to improve application stability
-

Education

IELTS-certified (L : 7.0 Grade out of 9.0), demonstrating strong communication skills for international client interactions.

Master of Science (M.Sc.) in IT & Computer Applications, Saurashtra University (2020 – 2022)

Graduated with *8.3 CGPA*, Rajkot, Gujarat

Bachelor of Science (B.Sc.) in Information Technology, Atmiya University (2017 – 2020)

Graduated with *8.9 CGPA*, Rajkot, Gujarat

Published IOS Applications (Live On App Store)

- **Dual Camera Capture** – Engineered advanced multi-camera system using **AVCaptureSession**, enabling **simultaneous front & rear 4K 60fps recording**, with **real-time processing, compression, password-protected ZIP uploads**, and **secure Firebase Storage pipeline**, along with capturing **sensor data (GPS, accelerometer, gyroscope, magnetometer, barometer, pedometer, device motion)** for a complete production-grade solution. [Project Video \(clickable\)](#)
 - **Marketplace Platform (Classifieds & Commerce Application)** - Designed and delivered a scalable buy-sell system across agricultural and consumer use cases, with **10K+ active users, performance optimization, efficient image handling**, and **secure API communication** to ensure reliable usage at scale. [App Store \(clickable\)](#)
 - **Diet Planner App** – Built a health-focused app that **tracks diet data**, performs **automated calculations**, and provides **personalized plans**, with features like **reminder notifications, water intake tracking**, and **sound alerts** for daily routines. [Project Video \(clickable\)](#)
 - **Crypto Wallet Application (Web3 & Blockchain Platform)** - Developed a secure wallet solution using Web3 SDKs, enabling **secure transactions, wallet balance tracking**, and **token management**, with a focus on reliable and scalable blockchain interactions. [Project Video \(clickable\)](#)
 - **Personal Recipe Management Application** - Developed a structured solution for managing recipes with **category-based organization, ingredient search, meal planning**, and **shopping list management**, along with **offline access** to ensure seamless usage without internet. [App Store \(clickable\)](#)
 - **Mobility & Car Rental Platform (Customer + Dealer Ecosystem)** — Delivered a full-stack rental solution from concept to deployment, enabling **vehicle booking, dealer management, inventory handling**, and **secure transactions**, supporting a scalable and production-ready ecosystem. [App Store](#)
 - **Short Video Streaming Platform (Social Media & Content Ecosystem)** - Developed a high-performance video platform with **short-form video streaming, HD playback, content upload, user subscriptions**, and **personalized recommendations**, enhanced by **efficient buffering, scalable backend integration**, and a smooth UIKit-based user experience [App Store \(clickable\)](#)
 - **Insurance Management Platform (Policy & Claims System)** - Delivered a scalable solution from concept to deployment, enabling **policy management, claims processing, secure user data handling**, and **document management**, ensuring a reliable and user-friendly experience. [App Store](#)
 - **Laundry Service Platform** - Built a scalable booking solution with **service scheduling, online payments**, and **push notifications**, along with **order tracking** and **status updates** to deliver a seamless user experience. [App Store](#)
 - **Healthcare Learning Platform (Mnemonics-Based Education System)** - Built an interactive solution to simplify complex medical concepts using **visual mnemonics** and **structured content delivery**, with **content protection mechanisms** including restricted access, secure media handling, and prevention of unauthorized sharing, ensuring reliable learning and content integrity [App Store](#)
 - **Telemedicine & Healthcare Platform (Doctor Patient Ecosystem)** - Delivered a comprehensive solution with **dual-role user flows (doctor & patient), home lab test bookings**, and **appointment management**, enabling a seamless and scalable digital healthcare experience. [App Store](#)
 - **Donation & Campaign Management Platform (Non-Profit Ecosystem)** - Built a scalable solution for **donation processing, campaign tracking**, and **user engagement**, extended with **watchOS application** and **widgets** for real-time access and improved accessibility across Apple devices. [App Store](#)
 - **Location-Based Deals & Discounts Platform (NYC Market)** - Delivered a targeted solution for **local deal discovery, discount management**, and **location-based content delivery**, optimized for the NYC market with a smooth and scalable iOS experience. [App Store](#)
 - **E-Commerce Platform (Perfume & Retail Application)** - Delivered a full-cycle solution from concept to deployment, enabling **product catalog management, secure checkout & payments, order tracking**, and **user account management**, ensuring a smooth and scalable shopping experience. [App Store](#)
 - **Community Engagement Platform (Events, Local Business & Media Streaming)** - Built a location-focused solution for Scioto County, Ohio, featuring **event listings, local business discovery**, and **live radio streaming**, enabling real-time community engagement through a scalable iOS experience. [App Store](#)
 - **Video Streaming Platform (YouTube-like Content Ecosystem)** - Delivered an end-to-end solution with **video upload, HD playback, user subscriptions**, and **personalized recommendations**, integrated with **reward-based coin system** and **Google Ads monetization**, ensuring scalable performance and smooth user engagement.
-

Portfolio Projects (GitHub/Dev1008iharsh)

- **HarshVideoCall** – Production-grade real-time video engine built with **Swift** using **Agora RTC SDK**, supporting **low-latency video/audio calls**, **AI-based virtual backgrounds (blur/image)**, and **network-aware call handling**. Optimized with **thread-safe UI updates**, **efficient memory management (ARC)**, and **on-demand SDK initialization** for high-performance real-time communication. [GitHub \(clickable\)](#)
- **RyderHarshApp** – Built a production-grade ryder location tracking engine using **Swift**, enabling **high-precision GPS tracking**, **smooth marker animations (CATransaction)**, and **Google Maps integration (Routes API, Places API)**. Implemented **background location updates**, **app termination recovery (SLC)**, and optimized **battery usage**, **threading (GCD)**, and **real-time UI performance** for scalable logistics solutions. [GitHub \(clickable\)](#)
- **HarshHubGit** – GitHub followers app built using **programmatic UI and MVC**, supporting user search, pagination, profiles, and favorites. Implemented **async/await networking**, **NSCache image caching**, and **optimized UI rendering** with clean, scalable architecture. [GitHub \(clickable\)](#)
- **TeaTimeHarsh** – Modular iOS app built using **UIKit (programmatic + storyboard)** with **Firestore (Auth, Firestore, Storage)**, featuring **offline-first architecture with Core Data sync**, **Google Maps integration**, media uploads with **background processing**, network monitoring, caching, animations, and scalable data modeling. [GitHub \(clickable\)](#)
- **QuizHarshGoogleAd** - Dynamic quiz platform using MVVM, server-driven content, Auto Layout adaptive UI, closures, Singleton state management, **advanced AdMob integration (Google Ad)(Banner/Interstitial/Rewarded/App-Open)**, and **optimized loading strategies**. [GitHub \(clickable\)](#)
- **HarshRealTimeChatApp** -Modular programmatic iOS app with **Firestore Realtime DataBase/Auth**, reactive MVVM architecture, sub-second message delivery, **advanced spring animations**, **media optimization**, and **scalable real-time sync for users**. [GitHub \(clickable\)](#)
- **AiChatHarshGemini** - Swift chat app integrating **Google Gemini APIs**, **text & image generation**, **Markdown rendering**, **dynamic UITableView cells**, **request routing**, and **modular clean architecture** for scalable AI features. [GitHub \(clickable\)](#)
- **IndianPaymentGateway** - Integrated multiple payment gateways including **Razorpay and Stripe**, implementing **secure payment flows**, **transaction handling**, and **validation**, with support for scalable and extensible gateway integration. [GitHub\(clickable\)](#)
- **NewsOfflineSyncCoreData** - Swift + UIKit app using **MVVM**, **Core Data offline storage**, **NSURLSession networking**, **pagination**, **background sync**, **image caching (memory+disk)**, **WebView integration**, **Swift Concurrency**, and all type **Google AdMob monetization**. [GitHub \(clickable\)](#)
- **TwitterHarsh** - Twitter/X-inspired app with **Firestore email authentication**, user profiles, tweets, photos, and **hashtag search**. Includes **All/My Tweets feeds**, **profile editing**, **custom photo picker** (camera, crop, filters), and **Dark/Light mode**. Built with **Firestore**, **Firestore Storage**, and **Combine**. [GitHub \(clickable\)](#)
- **HarshFlix (Netflix Clone)** - Swift-based movie trailer app using **Movies & YouTube APIs** with **search**, category tabs, **in-app playback**, **Dark/Light mode**, **Core Data** offline saves, and enhanced visual effects. [GitHub \(clickable\)](#)
- **Harsh iShop (E-commerce)** - End-to-end e-commerce app built **from UI design to deployment**, supporting **product listing**, **search**, **cart**, **coupons**, **order placement/cancellation**, **delivery date & time selection**, **Google Maps with address autocomplete (lat-long)**, **payment gateway**, **customer support**, **multi-language support (English & Arabic)**, and **REST APIs with MVC architecture**.[GitHub \(clickable\)](#)
- **MatchingHarshCard** - Interactive **card-matching puzzle game** with timed gameplay, smooth touch controls, and sound effects, designed to enhance **memory and focus** while providing a fun experience for all age groups.[GitHub \(clickable\)](#)

Technical Skills & Expertise

- **Languages & Frameworks:** Swift, UIKit, SwiftUI, Combine
- **Tools & Development Workflow:** Xcode, Git/GitHub, TestFlight, App Store Connect, Crash Monitoring, Postman
- **Project Management & Collaboration:** Jira, Trello, Notion
- **AI-Assisted Development Tools:** ChatGPT, Claude, Gemini, GitHub Copilot, Xcode inbuild assistant
- **Version Control & Code Management:** Git, GitHub, GitLab, Bitbucket, SourceTree
- **Payment Gateway Integration:** Razorpay, Stripe, KNET, and other payment gateways, with experience in secure payment flows, transaction handling, and payment validation
- **Architecture & Design:** MVC, MVVM, Clean Architecture, Modular Design, SOLID Principles, Dependency Injection
- **Networking & APIs:** REST APIs, GraphQL, URLSession, WebSockets(Firebase), API Security, Request Optimization
- **Data & Persistence:** Core Data, SQLite, Realm, Firestore, Offline-First Architecture, Caching Strategies
- **Concurrency & Multithreading:** GCD, async/await, Swift Structured Concurrency, Background Tasks, Operation Queues
- **Performance & Optimization:** Advanced memory management (ARC, retain cycle prevention), leak detection and resolution, performance tuning, efficient rendering (Core Animation), optimization of large-scale data handling, and continuous monitoring to ensure high responsiveness and stability
- **Security & Compliance:** Keychain Services, Secure Storage, Data Protection, Authentication Flows, Privacy Compliance
- **iOS System Frameworks:** Core Location, MapKit, AVFoundation, Core Animation, Photos, UserNotifications, AVCaptureSession
- **Cloud & Backend Integration:** Firestore (Auth, Firestore, Storage, Analytics, Cloud Messaging), Secure Data Sync, Supabase
- **Mobile Capabilities:** Push Notifications, Background Processing, Deep Linking, Universal Links, In-App Purchases
- **Communication Tools:** Slack, Microsoft Teams, Zoom, Google Meet
- **Documentation & Productivity Tools:** Google Docs, Microsoft Excel, Microsoft PowerPoint, Microsoft Word
