

Harsh Darji

Senior iOS Engineer | Swift • UIKit Expert • SwiftUI Basics

+91 9662108047 · Gujarat, India · darjih848@gmail.com · Portfolio | LinkedIn | GitHub

Senior iOS Engineer with 5+ years of experience building scalable, high-performance native applications using Swift. Delivered 20+ apps from concept to App Store and contributed to 35+ products across e-commerce, healthcare, social, and enterprise domains.

Specialized in UIKit-driven architecture, offline-first systems, performance optimization, and secure backend integrations (Firebase, REST APIs). Proven ability to modernize legacy codebases, reduce crashes, optimize memory usage, and deliver production-ready mobile systems used by large user bases.

Strong collaborator with experience working with cross-functional teams, mentoring junior developers, and driving clean, maintainable architecture.

PROFESSIONAL EXPERIENCE

Senior iOS Mobile Application Developer, Remote (Evince Infotech — Surat / Rajkot, Gujarat)

October 2024 – Present

- **Modernized legacy iOS applications** for newer platform versions, adopting updated APIs and Apple guidelines to ensure **long-term compatibility and stability**
- **Migrated legacy codebases from Swift 3-4 to Swift 5-6**, implementing modern concurrency using **async/await**, structured concurrency, and updated language features
- Refactored outdated modules to improve **memory management**, eliminate retain cycles, and ensure **thread-safe operations**
- Updated applications to support **latest iOS versions (including iOS 26 readiness)** while maintaining backward compatibility
- **Designed and optimized networking layers** including authentication, request handling, and robust error management for **reliable backend communication**
- **Upgraded deprecated system APIs and third-party SDKs**, improving **maintainability** and reducing **production issues**
- Integrated multiple Apple frameworks (**UIKit, AVFoundation, CoreLocation, BackgroundTasks**) to deliver **complex features efficiently**

Senior iOS Software Developer, On-site (HK Infosoft — Ahmedabad, Gujarat)

March 2025 – July 2025

- **Enhanced an enterprise-grade iPad application** by introducing new modules and improving **performance for large-scale usage**
- Implemented **robust offline data loading**, maintaining **seamless functionality during network loss**
- Developed **secure multi-camera recording**, supporting simultaneous front- and rear-camera capture
- Built automated **video processing pipelines with encryption** and secure upload to **Firebase Storage**

Senior iOS Developer, Hybrid (Ambiw — Rajkot, Gujarat)

August 2022 – February 2024

- **Engineered and delivered iOS applications end-to-end**, from requirement analysis to App Store deployment, ensuring scalability and maintainability
- **Optimized performance**, reducing launch time and improving memory efficiency by ~10% for smoother user experience
- Identified and resolved **memory leaks and networking bottlenecks**, improving stability and lowering crash rates in production
- Implemented **clean architecture and reusable components**, accelerating development cycles and simplifying future enhancements
- Developed **watchOS extensions and widgets** and expanding the product ecosystem across Apple platforms
- **Collaborated directly with international clients**, clarifying requirements, proposing technical solutions, and ensuring timely delivery with high satisfaction
- Acted as a primary technical point of contact during development cycles, providing updates, demos, and feedback incorporation
- Mentored junior developers, promoting best practices and improving overall team productivity

- Contributed to a **crypto wallet application** using Web3 SDKs for **secure transactions and token management**
- Refactored existing projects to improve **code quality, maintainability, and performance**
- Delivered **scalable features** for healthcare and service-based applications

Junior iOS Developer (Intern → Full-Time), On-site (Tiva ArtSoft — Rajkot, Gujarat), Rajkot, Gujarat

December 2019 – November 2021

- Contributed to the development of **multiple native iOS applications** from **implementation to App Store submission**
- Assisted in **migrating legacy codebases** to newer **Swift versions** and updated **iOS frameworks**, improving stability and maintainability
- Implemented **REST API integrations, Firebase services**, and core **UI features** across healthcare, e-commerce, and education domains
- Collaborated with senior engineers to **fix bugs**, improve **performance**, and deliver **production-ready features** on schedule
- Gained hands-on experience in the **end-to-end app development lifecycle**, including testing, deployment, and post-release support

EDUCATION

- M.Sc. IT & Computer Applications, Saurashtra University (2020 - 2022) | 8.3 CGPA, Rajkot, Gujarat
- B.Sc. Information Technology, Atmiya University (2017 - 2020) | 8.9 CGPA, Rajkot, Gujarat

PUBLISHED IOS APPLICATIONS (LIVE ON APP STORE)

- **Piplana Pane** – Gujarati **buy-sell marketplace app for farmers** (OLX-style) to trade cattle, tractors, crops, and agricultural products. Actively used by **10K+ users**, with focus on **performance optimization, efficient image loading, and secure API communication** to ensure smooth and reliable usage at scale. [App Store \(clickable\)](#)
- **Desh Parivahan** – Comprehensive transport service application designed to streamline vehicle booking, trip management, and logistics coordination. Enables users to manage transportation workflows, track services, and access essential transport-related information through a scalable and performance-optimized mobile experience. [App Store \(clickable\)](#)
- **MyCookbook** – Personal recipe manager for storing, organizing, and searching recipes with categorization, ingredient-based lookup, meal planning, shopping lists, editing tools, and offline access for use without internet. [App Store \(clickable\)](#)
- **Rydezilla (Car Rental + Dealer App)** – Built complete **car rental ecosystem (customer + dealer apps)** from scratch to deployment. [App Store](#)
- **UBVideos(Instagram Reel)** – YouTube Short/ Instagram Reel style video streaming app supporting content upload, HD playback, subscriptions, and personalized recommendations, built for smooth performance with efficient buffering, scalable backend integration, and a clean UIKit interface. [App Store \(clickable\)](#)
- **Just Insure** – Insurance management app, created from scratch to deployment. [App Store](#)
- **Moon Laundry** – Laundry booking app with payments & push notifications. [App Store](#)
- **MediNaz (Healthcare + E-commerce)** – Transforming forgettable facts into memorable pictures and characters, covering important topics with visual mnemonics and need-to-know facts. [App Store](#)
- **HealWell24 (Doctor & Patient Apps)** – Implemented **dual video functionality** for telemedicine, with features like **doctor video consultations** and **lab test bookings at home** for a complete healthcare experience. [App Store](#)
- **IRUSA – Islamic Relief USA** – Donation & campaign tracking app with **watchOS app + widgets**. [App Store](#)
- **Dashible Deals** – Local NYC deals & discount app, delivered for iOS & Android platforms. [App Store](#)
- **Eshal Perfumes** – Perfume e-commerce app, created from scratch to deployment. [App Store](#)
- **Repairmint Business** – Business app for commission agents & trading. [App Store](#)
- **Local Happenings (Community App)** – Built for Scioto County, Ohio: event listings, local businesses, and live radio streaming. [App Store](#)
- **Auction Management & Stadium Management Apps** – End-to-end event & auction handling solutions. [App Store \(clickable\)](#)
- **Video Streaming App (YouTube-like)** – End-to-end streaming platform with **upload, playback, subscriptions, and recommendations**.

- **7Arts (iOS version)** – iOS implementation of an **online art marketplace** with galleries, auctions, and artist discovery. (*Public iOS link unavailable*) [Android Reference \(clickable\)](#)

PORTFOLIO PROJECTS (GITHUB/DEV1008IHARSH)

- **TeaTimeHarsh** – Modular **programmatic UIKit** app with **Firestore/Auth/Storage**, **offline-first Core Data sync**, **MapKit**, **media uploads**, **background tasks**, **network monitoring**, **caching**, **animations**, and **scalable data modeling**. [GitHub \(clickable\)](#)
- **QuizAppHarsh** – Dynamic quiz platform using **MVVM**, **server-driven content**, **Auto Layout adaptive UI**, **closures**, **Singleton state management**, **advanced AdMob integration** (Banner/Interstitial/Rewarded/App-Open), and **optimized loading strategies**. [GitHub \(clickable\)](#)
- **AI Chat Application** – UIKit chat app integrating **Google Gemini APIs**, **text & image generation**, **Markdown rendering**, **dynamic UITableView cells**, **request routing**, and **modular clean architecture** for scalable AI features. [GitHub \(clickable\)](#)
- **NewsAppHarsh** – Swift + UIKit app using **MVVM**, **Core Data offline storage**, **URLSession networking**, **pagination**, **background sync**, **image caching (memory+disk)**, **WebView integration**, **Swift Concurrency**, and **AdMob monetization**. [GitHub \(clickable\)](#)
- **TwitterHarsh** – Twitter/X-inspired app with **Firestore email authentication**, user profiles, tweets, photos, and **hashtag search**. Includes **All/My Tweets feeds**, **profile editing**, **custom photo picker** (camera, crop, filters), and **Dark/Light mode**. Built with **Firestore**, **Firestore Storage**, and **Combine**. [GitHub \(clickable\)](#)
- **HarshFlix (Netflix Clone)** – Swift-based movie trailer app using **TMDB & YouTube APIs** with **search**, category tabs, **in-app playback**, **Dark/Light mode**, **Core Data** offline saves, and enhanced visual effects. [GitHub \(clickable\)](#)
- **Harsh iShop (E-commerce App)** – End-to-end e-commerce app built **from UI design to deployment**, supporting **product listing**, **search**, **cart**, **coupons**, **order placement/cancellation**, **delivery date & time selection**, **Google Maps** with address autocomplete (lat-long), **payment gateway**, **customer support** (Freshchat SDK), **multi-language support** (English & Arabic), and **REST APIs with MVC architecture**. [GitHub \(clickable\)](#)
- **Crypto Wallet App** – iOS wallet application built using **Web3 SDKs** supporting **secure transactions**, **wallet balance tracking**, and **token management**. (*Public link not available*)
- **MatchingHarshCard** – Interactive **card-matching puzzle game** with timed gameplay, smooth touch controls, and sound effects, designed to enhance **memory and focus** while providing a fun experience for all age groups. [GitHub \(clickable\)](#)
- **TeaTimeHarsh** – iOS app for discovering tea places with **favorites**, **visits**, and **Google Maps navigation**. Implemented **offline support** using **Core Data + Firestore** and followed **Git branching & PR workflows**. [GitHub \(clickable\)](#)
- **AuraEcomShop** – E-commerce iOS application built using **Firestore** and **entirely in Swift with a programmatic UI (no Storyboards)**. Designed with **clean, scalable architecture** and **modular code structure**, following industry-standard iOS best practices. [GitHub \(clickable\)](#)
- **SwiftGenericApiMVVM** – Implemented a **generic, reusable networking layer** using **URLSession** with **MVVM architecture**, centralized API handling, and memory-safe design to ensure clean, scalable, and bug-resistant network management. [GitHub \(clickable\)](#)
- **HarshVariousApiCode** – Built a **reusable iOS utility and networking framework** to speed up development across apps. Includes **custom image downloading with caching**, **generic TabBar**, **barcode handling**, **common utility classes**, **ImagePickerManager**, **image upload using URLSession**, **Alamofire image upload**, **LocationManager**, **generic API clients using URLSession (Apple's way)**, **generic Alamofire networking**, and **Swift models with SwiftyJSON parsing**. Designed with **scalable, memory-safe architecture**, allowing developers to integrate features by simply calling shared classes, significantly reducing repetitive code and development time. [GitHub \(clickable\)](#)

TECHNICAL SKILLS & EXPERTISE

- **Languages & UI Frameworks:** Swift, UIKit (Primary), SwiftUI (working knowledge), Combine
- **Architecture & Design:** MVC, MVVM, Clean Architecture, Modular Design, SOLID Principles, Dependency Injection
- **Networking:** REST APIs, GraphQL, URLSession, WebSockets, API Security, Request Optimization
- **Databases & Persistence:** Core Data, Realm, Firestore, Offline-First Data Handling, Caching Strategies
- **Cloud & Backend Integration:** Firebase (Authentication, Firestore, Storage, Analytics, Cloud Messaging), Secure Data Sync
- **System Frameworks:** Core Location, MapKit, AVFoundation, Core Animation, Photos, UserNotifications
- **Performance Optimization:** Memory Optimization, Leak Detection, Efficient Rendering, Large-Scale Data Handling
- **Concurrency & Multithreading:** GCD, async/await, Swift Concurrency, Background Tasks, Operation Queues
- **Security:** Keychain Services, Secure Storage, Data Protection, Authentication Flows, Privacy Compliance
- **Tools & Delivery:** Xcode, Git/GitHub, CI/CD Pipelines, TestFlight, App Store Connect, Crash Monitoring
- **Mobile Platform Features:** Push Notifications, Background Processing, Deep Linking, Universal Links, In-App Purchases
- **Testing & Quality:** Unit Testing, Debugging, Production Issue Analysis, Stability Improvements
